If you choose to work with us our solutions are based on the following pillars:

ACHIEVE GROWTH

MANAGE EFFICIENTLY

**ANALYZE WHAT HAS
BEEN ACHIEVED**

MMMS

MedinyX Medical Management System

This platform has been made for the purpose of :

→ HOSPITALS AND CLINICS

which takes into account the complexity of today's business online and offline to manage patients from the point of an appointment until discharge. The system is highly complex yet we have simplified it and dissected it into several segments that will perhaps improve upon the existing platforms you currently operate upon. If you are a new facility then such as system shall help place a lot of procedures into your operations that would have automatized checks and balances on your

The MMMS empowers managers and the a management to have data at their fingertips to monitor on a consistent basis on performance, efficiency, control and revenue. If you are running a standalone facility or multiple clinics the MMMS is structured on a platform that differentiates it over the flow of processes in-bedded within it as a tool for business enhancement and operations. Further connected with our Bedside patient screens that fit into a gross matrix of add on services, medical compliance's and call to action programs.

→ THE MODULES

This is not going to be a detailed version on each module and segment but rather a synopsis for your understanding what the MMMS touches upon. It is important we give you a glimpse as this might serve as a foundation but eventually with our experience and know how each operation is different and therefore the foundation needs to be strong. The foundation synopsis should give you a good idea on how the various touch points are managed that at a cumulative level provide a real time big data advantage on your daily operations.

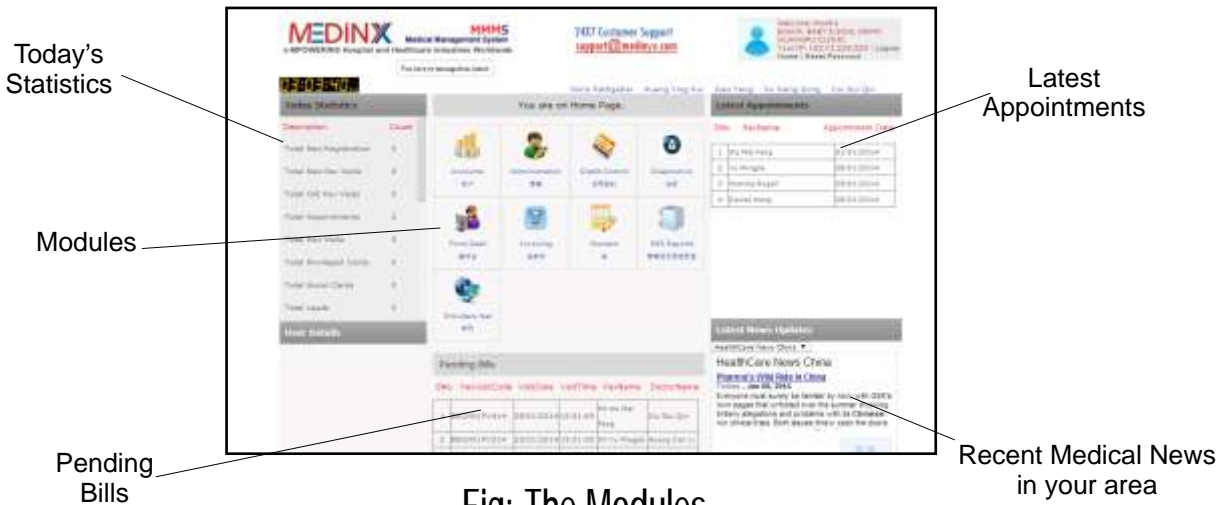

Fig: The Modules

→ Patient registration/Appointment scheduler/Call center solutions

Patients today seek instant solutions to their medical problems. The solutions we provide a clinic or a facility is to begin with the basic urgent addressable of when and how a patient gets in touch with a hospital or a clinic. MedinyX also has the know how to increase an online foot fall of your patients at a local level. Sorting out those appointments, from a call to an online request.

A walk in or an appointment based patient the system is designed to pull and push data between the patient and the administration. Handling at that very point cashless facilities and arrangements of the various insurers as well the MMMS shall ensure it works for the financial benefit of the facility.

→ Out Patient Module

As a clinic or a hospital the outpatient flow of patients from the point of registration or the appointment made plays an important role. The services provided in the various areas added on with additional services and not just a consultancy are important to capture.

From the various sub departments of Laboratories to Diagnostics each and every area must play its role. Alternative clinics and medical centers providing additional or a bouquet of services based on sessions, outside consultants and so on are equally taken into account from the point of services rendered unto payment settlements from the facility to its medical personnel. Each and every part of the process captured and accounted for.

→ Plan Management

Be it a plan made at the facilities level as a health package or test each and every element is customized to the last detail. Interlinking these packages with online sales platforms to offline direct in-house enrollments onto corporate based health check ups and preventive plans the MMMS is designed to address these needs at various levels. Flexible with today's fast paced world and adaptability new features, limitations and benefits can all be added and managed at the same time

→ Out Patient Cashless For Insurance

Cashless provision for outpatient billing and management is a critical element for facilities these days. The MMMS manages and controls services on a real time basis interlinking the insurers account with the facilities upper tier management to ensure a relationship between the insurer and the facility is managed and administered on a timely yet professional manner. Addressing the needs of local, State and International insurers the Out patient Cashless module has been built with tremendous know how and expertise from within the industry taking into consideration the Facility, the patient and the insurer into account.

→ Diagnostics, Lab, Dialysis Center, Physiotherapy And Other Areas

The MMMS is linked from the point of doctor outpatient services to all the sub departments of a facility. Department heads will be able to get online requests from the treating doctors should the doctors choose to go digital in the environment and equally instruct the sub departments on what is to be done.

The medical fraternity is connected onto the eco system with the MedinyX Pads* that's not only give them track of their schedules but also their patient files which they can directly pull out from within the system. Each department shall be able to keep a track on the patient, the needs, the profile and specifically for private facilities managing and maintaining a personalized level of patient care counts the most. This is a very important factor as one of the indirect measures and differentiation on implementing such a Hi tech system is to also ensure patients come back to the facility and not only because of their treating doctor. In the long term this helps doctors also stick to their practice in a specific facility as a repeat patient ratio is what is also important.

*Subject to opting for the MedinyX Pads solutions

Fig: Diagnostics Modules

→ Pharmacy

Should you as a facility choose to run your own pharmacy we understand the challenges faced on it. The Pharmacy platform is a platform of its own as managing real time inventories, sales and stock values at the Pharmacy level needs to be handled well. Sales of medicines to patients must be accounted for with proper compliance's in place and procedures must be met.

The pharmacy platform serves from the point of purchase, towards a lean inventory system to the point of sale direct on out patients to in patient supplies. Integrated further with a pharmacy benefits management system for insured members to either claim their refunds on renewal medicines to creating an online direct refill supply mechanism the MedinyX Pharmacy retail management system integrates itself either as a stand alone or built in with the eco system of the entire facility.

Retail Pharmacy

Once more directly from the doctors chamber whereby the treating doctor can place a real time order* at the time of consultancy and the patient on his way out can simply pick up the medicines. Once more creating a differentiation via technology at your facility.

*Subject to opting for the MedinyX Pads solutions

→ In Patient Module

Like the outpatient module the inpatient management takes intake of the whole eco system from the point of registration to the point of admission. Assigning and managing the patient on a patient centric measure by closely medically monitoring the patient to ensure quality is managed over time. Connecting the nursing stations to administration of procedures, to additional back end services the inpatient module is comprehensive and detailed. The foundation of the MMMS Inpatient is strong but needs to be discussed at a level of customized needs based on your facilities needs.

The Inpatient module handles the various levels from

- In patient administration (Medical and Non medical)
- In patient billing/Direct/Discounts/Cashless/Plans/Packages/Insurers
- In patient doctors accounting
- In patient patient management/Nursing care modules
- In patient department-wise management/Lab/Diagnostics/Surgeries/Dialysis/Physiotherapy
- In patient sub centers/IVF/Aesthetic/Medical Tourism/Pharmacy/Medication
- In patient discharge

→ Invoicing/Doctors Fees Accounting/Insurers/Direct/Credit Management/Credit Collection

In order to summarize the importance of this module the entire invoicing and collection system is linked on a centralized basis from the various perspectives of the facilities operation and handles the elements from basic invoicing of services at multiple levels, multiple currencies based on the complexities of packages, rate lists, discounted lists, packaged pricing and integrate the eco-system with the importance of collection of credit out standings, to discounts provided, to settlement of doctors fees based on per patient, per session. per service basis.

We understand doctors and consultants are an important backbone of operating a facility and equally ensuring that they are neither underpaid or overpaid with the complex sharing modus operandi the MMMS integrates a flexibility based on the relationship, capability and agreements between the facilities administration and medical personnel at an individual level. Settlement of credits and collection of credits is an equally important task that needs to be managed on a daily basis with managing the business from a front end and back end perspective. The MMMS can help you solve these challenges.

→ Real Time Reporting/Data Analysis/Key Performance Indicators

The real outcome of having such a system boils down to understanding the business analytics on a daily and monthly basis. For facilities that are small to mid sized operations and especially clinics having multiple branches and remain spread out with a centralized operation and administration it is very very important to get real time uninterrupted/unbiased information.

From medical personnel performance, out patient patterns, to best performers, to most selling services you name it. A daily report at various levels of departmental heads or facility heads to your monthly business review meetings the MMMS is bound to deliver these reports accumulated from an amalgamation of business processes within your facilities to provide you a much needed insight to keep up with the ever changing, ever demanding environment.
